MAIBACH presents itself to you as a strong and reliable partner with high quality standards (DIN EN ISO 9001:2000 certified). Many of our products are patented or bear utility-model patents.

MAIBACH headquarters in Göppingen

The wide range of MAIBACH products:

- Amphibian protection walls
- Amphibian protection fences
- Anti-glare system
- Bridge fencing
- Bridge cladding
- Emergency phone protection
- Fold-down delineators
- Guide barriers
- Guide posts
- Guide profiles
- Guide walls
- Kart track elements
- Material bins
- Mileposts
- Mini markers
- Noise protection cabins
- Noise protection panels
- Noise protection walls
- Reboundable posts
- Reflectors
- Snow bars
- Snow fences
- Speed reducers
- Station markers
- Warning ramps

MAIBACH

MAIBACH - safer guide systems and prevention for winter driving conditions

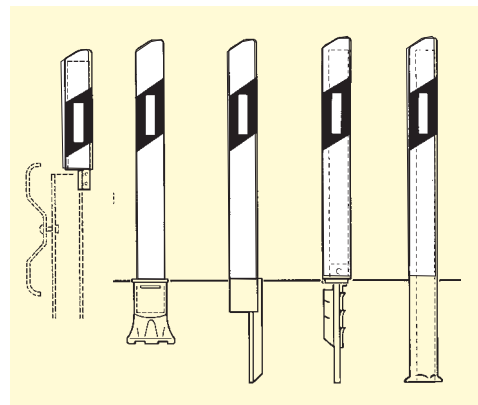

Bridge cladding

Bridge cladding with safety net

Bridge cladding with acrylic glass

Guide posts

A complete range of guide posts offer every possible method of mounting. Accessories include mounting hardware and reinforcing systems. MAIBACH guide posts reflect decades of practical experience.

GRP material bins

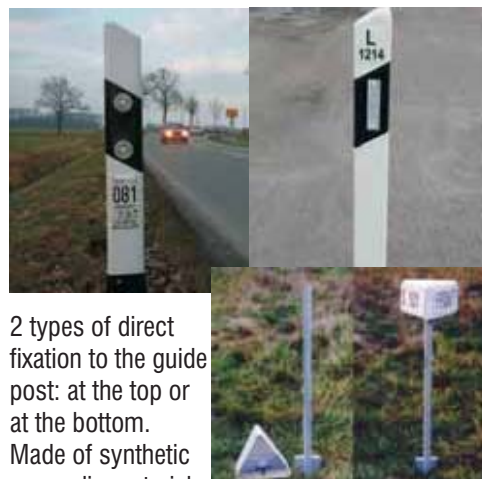

Available in all standard sizes. Suitable for all types of de-icing material. Not influenced by heat or cold, acid-resistant. Heavy duty construction with non-corrosive fastening hardware. UV-resistant. With or without opening in front.

Bridge cladding with safety net or acrylic glass

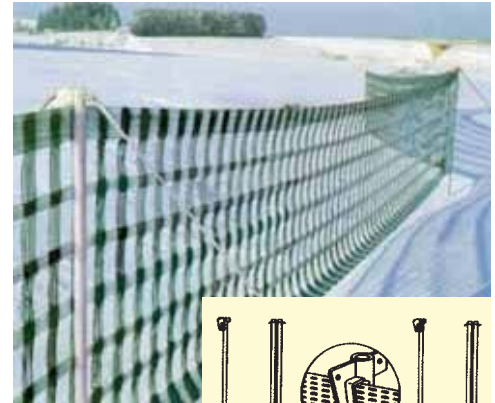

Summer and winter protection for traffic below a bridge. The variable fastening system fits to all standard railings. No additional drilling necessary. Positive benefit: wind protection. Tested by the University of Karlsruhe (test report available).

Mileposts

2 types of direct fixation to the guide post: at the top or at the bottom. Made of synthetic or acrylic material. Also available for fixation to triangular bases.

Snow fence

Over thirty years experience in Germany and throughout Europe. Easily assembled, thanks to its clean design. The netting pattern provides maximum snow-retaining function. High-grade materials ensure very long lifetime. Cables are made of V4A. Net is made of coated, woven polyester. Easy transportation thanks to light weight. Compact for storage. Standard height 1.30 meter. For especially exposed areas, a 1.80 meter high fence is available.

Emergency phone protection

The protecting panel is made of 3 mm thick corrugated acrylic glass. All steel parts are hot galvanised according to EN ISO 1461. Connecting parts made of special steel. Easy and quick installation.

MAIBACH

MAIBACH -

your partner for more road safety

Guide barrier

Made of recycling material. Simple installation and removal through male/female connector system. Elements can be easily removed. Push-in delineators and reflectors complete the range.

Mini markers with delineator

Easy handling thanks to recessed handholds. Anti-slip rubber nobs on bottom side. Mounting holes for securing mini markers on the road surface. Standard colours yellow or white, other colours available on request. Delineator can be easily pushed in.

Pierhead

Available in two sizes. UV- and weather resistant. A reflective and directive foil ensures optimal visibility on road exits.

Plastic kart track safety barriers

For indoor and outdoor use. Available in two sizes offering high flexibility. Quick and easy assembly thanks to plug-in system. Large scale of accessories: shock resistance plates, safety fences, forklift adapters. Available in many RAL colours.

Guide profiles for crash barriers

Sharp curves become far less dangerous with our clip-on guide profiles, which are simply clipped on the crash barrier. Excellent day and night visibility thanks to alternating colours and the special reflective 3M foil. Suitable for type A or B profiles.

Anti-glare system

EN 12676-1 certified

Our effective, accident-preventive anti-glare system complies with the European norm EN 12676-1 (test report available). The fracture-resistant vanes are made of high-density polyethylene. The system is adaptable to every type of crash barrier and road separation. Vanes available in different heights and colours.

Warning ramps with reflectors

Made to secure short-time roadwork sections. Drivers are alarmed when they drive over the warning ramp, and can react before causing an accident in the roadwork section. Heavy duty material made of special synthetic, with integrated reflective glass pearls.

Guide Wall type 800

Plastic guide walls

For safe traffic control. Quickly and easily placed on any type of road, from urban street to motorways. Provides an effective safety barrier for pedestrians and guidance for drivers.

Guide wall type 500

Guide wall type 500 can be easily connected even in angles of 90°.

Fold-down delineator

Easy and space-saving transport. For short-term roadwork sections. Quick and easy installation for many purposes. With spring mechanism.

Soft speed reducer

The best choice when you want to reduce speed in a „soft“ way. It consists of two semicircles of 150 cm in diameter, which can be fitted together easily. Height increases from the outside to the center from 10 mm to 80 mm. Available in different colours.

Self-straightening posts

For road signs. Reboundable device with spring. Can be bound to all sides. With plastic or steel tube.

MAIBACH -

active in environmental protection with new ideas

Permanent amphibian protection with steel elements

The guide walls are made of 60-80 my hot-galvanised 2.5 mm sheet steel. Upon request available with colour paint. Elements are easily and quickly assembled and adapted to any landscape. The guide system has a high stability and meets all requests in terms of colour and design.

Permanent amphibian protection with concrete elements

The excellent stability is proved by static calculations and in practice. Thanks to the L-shaped profile, excavation work can be reduced up to 50%. For reasons of design and quality of material, our L-system needs no steel reinforcement. Thus, the elements can be installed much easier and they are absolutely corrosion-free.

Mobile amphibian protection

The patented fastening system makes the assembly of the fabric very easy. Hold-down clamps are available in case that the fence shall not be dug into the ground. On the top, the 45° angle prevents the amphibians from climbing over. The fabric is tear-resistant, has a long lifetime and is very durable.

Further examples from our range of permanent and mobile amphibian protection

Installation with concrete elements

Steel installation, galvanised

Patented fastening

Fastening to a fence

Tunnel for small animals

Amphibian stop drain

Steel elements attached to a tunnel

Mobile fence, light version

Light version fastened to a fence

noise barriers for roads, airports, rail and industry

Noise protection systems made of glassfibre reinforced plastic, aluminium or wood

Lightweight, high sound absorption on one or both sides. Corrosion- and temperature-resistant for long and maintenance-free life. Self-supporting over 4 or 5 meters. To date, we have produced several 100,000 sqm in Germany and abroad.

Special noise protection systems made of steel or aluminium

Easy assembly and disassembly through special connections without influencing the overall stability of the construction. Available in all RAL colours. Large range of accessories, such as: integrated insulation windows, doors, ventilation and exhaust ducts, rollers, shutters etc. Major projects have been completed in Germany and abroad. Wall and ceiling panel can be delivered in matching design.

Examples of noise barriers:

Indoor noise barrier with all accessories

Noise barrier wall at a road

Noise barrier at a petrol station

Noise barrier at a fast-food restaurant

Noise barrier wall at an airport

Noise barrier at a shooting range

Noise barrier wall at a railroad track
